PROFILE

Cloud & DevOps enthusiast building hands-on foundations in Linux administration, Bash scripting, automation, Git/GitHub, system services, and cloud fundamentals. Experienced in creating repeatable system-monitoring workflows with Bash, Cron, systemd, and journalctl. Currently developing practical skills in Docker, CI/CD, AWS, networking, and infrastructure automation. Seeking a DevOps Trainee role to grow through real-world infrastructure and automation work.

EDUCATION

RKGIT

Bachelor of Computer Applications (BCA)

Ghaziabad, UP

Expected June 2027

St. Francis Convent Sr. Sec. School

Class XII (CBSE Board)

Bareilly, UP

June 2023

DEVOPS SKILLS

Operating Systems & Linux: Linux command line, filesystem management, permissions, ownership, groups, sudo/root, process & service management, networking, SSH

Automation & Scripting: Bash scripting, Cron scheduling, systemd/systemctl, journalctl, exit codes, automated logging

Version Control: Git & GitHub — repositories, commits, branching, pull requests, documentation

Cloud & DevOps: AWS Cloud Fundamentals, Docker, CI/CD concepts — currently learning

Programming: Python fundamentals for scripting and automation

Tools: VS Code, WSL2, Ubuntu, GitHub

DEVOPS PROJECT

Linux Server Health Monitor — Bash Automation | *Bash, Linux, Cron, systemd* | GitHub

- Built a Bash-based monitoring tool to check CPU, RAM, and disk usage and report overall system health as OK/WARNING/CRITICAL
- Added SSH and Cron service checks, exit codes 0/1/2 for automation, timestamped daily reports, and a persistent alerts log
- Automated execution every 5 minutes with Cron and verified scheduled execution and logs through journalctl
- Practiced Linux administration concepts including permissions, ownership, services, process monitoring, shell scripting, and command-line troubleshooting

DEVOPS LEARNING FOCUS

Currently building: Linux administration → Git/GitHub workflows → Bash automation → Docker → CI/CD → AWS cloud fundamentals → infrastructure and deployment automation.
